

CAE

CAE Lucina

OB-GYN Patient Simulator

CAE Lucina delivers an all-in-one simulation experience. Designed to demonstrate both gravid and non-gravid scenarios, this wireless manikin comes with a fetus to teach proper prepartum, labor, delivery and postpartum care as well as a non-gravid abdomen for clinical situations unrelated to maternity.

Integrated with maternal-fetal physiological modeling, CAE Lucina automatically reacts to medical interventions while the baby cries upon delivery and senses the amount of force applied to its neck.

Packed with advanced features and multiple simulated clinical experiences, CAE Lucina helps learners:

- Evaluate anterior and posterior lung sounds
- Witness realistic uterine contractions
- Monitor vital signs and maternal data
- Hear the fetal heartbeat
- Cut and clamp umbilical cords
- Control post-partum bleeding and uterine inversions
- Perform CPR and analyze metrics

CAE Lucina supports pregnancy conditions such as breech delivery, shoulder dystocia, and postpartum hemorrhage. Additional equipment is available to help teach the all-fours birthing position.

Delivering an immersive experience

Expand the training with Microsoft HoloLens2. The world's first augmented reality childbirth simulator, CAE LucinaAR, can be paired with the CAE Lucina manikin or used as a standalone tool to:

- Increase the understanding of childbirth and postpartum
- Improve knowledge through repeated self-paced learning
- Educate learners using minimal space

Valuable preparation for quality healthcare

Labor and delivery scenarios often require assistance from various healthcare providers—and with CAE Lucina, every necessary health professional is covered, resulting in a true interprofessional education (IPE) experience for learners.

General Practitioners

Detect normal and abnormal maternal-fetal vitals with authentic heart, lung and fetal sounds.

Obstetricians

Train to care for true-to-life pregnancy scenarios with realistic birth canal, uterine contractions, fetus rotations and post-partum options.

Midwives

Sharpen skills on various birthing positions and the McRoberts maneuver for shoulder dystocia.

Technical Specifications

Manikin

Dimensions: 69" H x 22" W x 15" D
(175 cm x 56 cm x 38 cm)

Weight: 111 lbs. (50 kg)

Electrical

Input: 100–240V, 50/60 Hz, 2.3 A

Internal batteries: 14.4V, lithium-ion, rechargeable

Available in two skin tones:

Medium
 Dark

Standard Equipment

Wireless and tetherless maternal manikin

Birthing fetus

Fetus to support Leopold's maneuvers

2 abdomens (1 for delivery, 1 for prepartum and postpartum)

Postpartum uterus

Static cervixes for vaginal exams

Additional static cervixes

Software-compatible tablet

CAE Maestro operating software

Fully and partially inverted uterus with a Uterine Inversion SCE

Wireless emulated patient monitor

4 patient profiles (3 maternal, 1 non-gravid)

10 simulated clinical experiences (SCEs)

- Normal delivery
- Instrumental vaginal delivery
- Fetal tachycardia (due to maternal pyrexia)
- Breech delivery
- Fetal central nervous system depression (due to narcotics administered to mother)
- Shoulder dystocia
- Major postpartum hemorrhage (due to uterine atony)
- Maternal cardio-respiratory arrest
- Eclampsia
- Umbilical cord prolapse

1 CAE Maestro Standalone license (manual mode)

1 CAE Maestro Standalone license (modeled mode)

One year of CAE Premier warranty support and maintenance, Training for Life™ and option to renew

Electronic user guide

Female patient module with non-gravid abdomen and 5 SCEs

- Chronic heart failure exacerbation
- Acute respiratory distress syndrome
- Sepsis with hypotension
- Brain attack with thrombolytic therapy
- Motor vehicle collision with hypovolemic shock

Optional Equipment

Microsoft HoloLens2 application for LucinaAR with 5 SCEs

- Normal delivery
- Breech delivery
- Shoulder dystocia delivery
- Instrumental delivery
- Postpartum hemorrhage

Additional Maestro Standalone licenses

Additional battery and charger

Abdominal cover for all-fours birthing position (required for this position)

CAE LearningSpace

Maternal Features

Airway and Breathing

Realistic upper airway

Positive pressure ventilation

Bag-valve-mask ventilation

Advanced lungs with mechanical ventilation support, including patient-triggered modes

Airway management and ventilation

Supports endotracheal tubes, nasalpharyngeal and oropharyngeal airways

Spontaneous breathing with chest excursion

Lung auscultation: anterior and posterior

Cardiovascular

Correct hand placement detection

Advanced CPR analysis (compression depth and rate, chest recoil, compression fraction, ventilation volume and rate)

Compliant with 2020 AHA BLS guidelines and 2021 ERC guidelines

Pacing, cardioversion and defibrillation

NIBP by auscultation and palpation

Heart sounds

Circulatory System

Electrocardiogram (ECG) monitoring posts for interface with real ECG monitor

12-lead dynamic ECG display

Dynamic bilateral pulses: carotid, radial, brachial, and dorsalis pedis

Variable pulse strength

Fetus

Fetal heart sounds (five locations based on fetal presentation)

Articulated fetal body and neck (with lateral neck movement), shoulders, elbows, hips and knees

Clinically accurate fetal size with tactile realism—50th percentile on the WHO growth chart

Fetal neck traction sensing

Palpable fontanel and sagittal suture

Fetal airway suctioning

Programmable audible cry upon delivery

Predicted 1-minute and 5-minute Apgar scores based on fetal blood-gas values

Umbilical cord that can be cut and clamped

Fluids

Postpartum bleeding tank (1.8 L)

Bilateral IV arms

Urinary catheterization

Epidural infusion

Intrapartum

Realistic palpable uterine contractions

Controllable rate and duration of contractions

Trendelenburg position with detection

Left lateral tilt with detection

Vertex and breech delivery

McRoberts maneuver with observable pelvic tilt

Suprapubic pressure support and detection with palpable symphysis pubis

Supports delivery of posterior arm during shoulder dystocia

Zavanelli maneuver with detection

C-section team training support

Rubin II and Woods: Screw maneuvers to resolve shoulder dystocia

Forceps application

Vacuum extraction

Intact/fragmented placenta with realistic color, texture and flexibility

Obstetrical

Integrated maternal-fetal physiological modeling

Realistic birth canal and vulva

Perineum support with accurate fetal descent and rotation

Multiple birthing positions: lithotomy, sitting and all-fours

Rectal suppository administration

Urgent obstetrical learning module

Postpartum

Postpartum hemorrhaging, including Class III hemorrhage

Contracted and boggy uterus

Bimanual compression and uterine massage with detection and automatic response

Uterine blood released upon massage

Inverted postpartum uterus

Uterine reversion

Intrauterine balloon insertion

Prepartum

Vaginal examinations for evaluation of the cervix, fetal station and position

Static cervixes represent various stages of dilation from closed to 5 cm, and effacement from 0 to 90%

Leopold's maneuvers

Epidural port with infusion and aspiration

Speech

2-way voice communication

Pre-recorded speech

User-recorded speech
