

Learn to assess and address severe traumas with Strategic Operations (STOPS) products, distributed exclusively by CAE. These medical simulation devices prepare medical and non-medical learners to treat patients on the scene, on the way and at the hospital.

With repairable skin and organs, STOPS products can be used repeatedly to practice treating the primary causes of death on the battlefield, such as:

- Excessive blood loss
- Airway complications
- Tension pneumothorax

Preparing clinicians for stressful encounters

Simulating extreme physical trauma scenarios, the STOPS product line includes:

- Surgical Cut Suit
- 6-in-1 Trainer
- Blood Pumping System (BPS)
- Blast Trousers
- Hyper-Realistic Moulage Kit (HRMK)
- TCCC/EMS Cut Suit
- TCCC Advanced Moulage Kit (TAMK)
- Multi-Junctional Bleed Trainer (MJBT)

Simulation meets special effects

Designed to simulate life-threatening situations, STOPS materials are equipped with realistic features, teaching learners to safely perform real procedures.

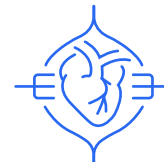

Hemorrhage Control

Practice reducing or eliminating rapid bleeding to increase chances of a patient's survival.

Needle Thoracentesis

Learn to remove fluid or air from around a patient's lungs during traumatic situations.

Exploratory Surgery

Create superficial incisions to perform surgery on organs such as the lungs, heart and abdomen.
