CAE Apollo

Reliability meets realism for nursing or prehospital care

A proven patient simulator for more effective training

CAE Apollo is a high-fidelity, tetherless and fully wireless adult patient simulator. CAE Apollo has all of the benefits of CAE’s modeled physiology to allow for more realistic patient behavior and responses to interventions. With tailored configurations for nursing or prehospital programs, CAE Apollo offers versatility and fidelity for individual or team training.

Built on a platform that has been field tested by more than 1,600 customers around the world, the CAE Apollo patient simulator allows learners to gain experience in a wide range of emergency or patient care scenarios. With a CPR analysis feature that is compliant with AHA guidelines, a realistic airway and articulation in the neck, shoulders, elbows, arms and hips, CAE Apollo sets the standard for reliability, quality and value in patient simulators.

Find out how CAE Apollo can redefine your expectations at caehealthcare.com

Your worldwide training partner of choice
Key Features

Airway
- Bag-valve-mask ventilation
- Head tilt/chin lift
- Jaw thrust
- Tongue swelling
- Bronchial occluder
- Surgical cricothyotomy
- Needle cricothyotomy
- LMA and other supraglottic adjuncts

Articulation
- Articulating neck, shoulders, elbows, arm and hips

Breathing
- Bilateral and unilateral chest rise and fall
- Spontaneous breathing
- Bronchial Occlusion
- Integrated SpO2 finger probe with simulated patient monitor
- Breath sounds over entire lungs
- Bilateral chest tube insertion, sensed, with fluid output

Circulation
- Defibrillation and cardioversion using live defibrillators
- Pacing (use of hands-free pads)
- 12-lead dynamic ECG display
- ECG monitoring posts and interface with real ECG monitor
- Bilateral blood pressure measurement by auscultation and palpation
- Bilateral carotid, brachial, radial, femoral, popliteal, posterior tibia, dorsalis pedis pulses

Gastrointestinal
- Nasogastric tube placement
- Bowel sounds, all 4 quadrants

CPR
- New: CPR analysis that is compliant with AHA 2015 guidelines
- Adequate chest compressions result in simulated circulation, cardiac output, central and peripheral blood pressures, carbon dioxide return
- Hand-placement detection

Secretions
- Eye, nose and mouth

Nursing Configuration Additional Features

Airway
- Upper airway designed from CT scan data of a real human patient
- Intubation: orotracheal, nasotracheal, retrograde, fiber optic
- Right mainstem intubation
gation
- Gastric distention with esophageal intubation
- Laryngospasm
- Airway occluder
- Posterior oropharynx occlusion

Breathing
- Carbon dioxide exhalation
- Bilateral needle decompression

Sounds
- Pre-recorded sounds and speech, custom vocalization recorded by the user, via wireless microphone
