# System Requirements

This section describes the minimum and optimal requirements to run the simulator.

## Software and Hardware

Any computer (or tablet) used to operate the Maestro software or TouchPro must meet minimum hardware and software requirements. However, optimal requirements should be met to enhance performance.

These requirements also apply to devices running Maestro Standalone.

### CAEMaestro Software

The following identifies the software version associated with the release of this user guide.

<table>
<thead>
<tr>

INTRODUCING MAESTRO

CAE Maestro software allows facilitators to control and monitor CAE patient simulators.

On the Fly vs. SCE

There are two ways to run a simulation in Maestro: On the Fly and Simulated Clinical Experience (SCE). When operating On the Fly, no content is authored ahead of time, and the simulation is simply controlled in real time by the instructor.

With an SCE, at least some details of the simulation are defined ahead of time (like states, patient profile, and other scenario background information). During an SCE, users can also make on the fly changes as appropriate.

Modeled vs. Manual

In Modeled Mode, the simulated patient is automatically driven by CAE Physiology, a computational model of human physiology. It is an engine that powers patient behavior, progression of clinical signs, and response to interventions. In Modeled Mode, instructors also have the option to override the model's output.

In Manual Mode, the instructor is responsible for driving changes to the patient's condition and responses to interventions. The Manual Mode interface features a streamlined layout with only the required controls to maximize ease of use.

All four combinations are possible. You can run a Manual SCE, a Modeled SCE, Manual On the Fly, or Modeled On the Fly.
Instructor Tablets and Software

This section describes the tablets Maestro operates on. Maestro can also be installed on a laptop. For more information, see System Requirements section in this guide.

Microsoft Surface Go

A Surface Go Instructor Tablet is used to run the software.

The Surface Go provides the capabilities of a laptop in an ultra-portable tablet. This mobile workstation features a Windows 10 operating system, a 10 in (25.4 cm) touchscreen, and up to nine hours of battery life. The Surface Go tablet comes equipped with pre-installed instructor software.

Samsung Galaxy Tab S3

The Samsung Galaxy Tab S3 with stylus is a mobile workstation supported by CAE for the Maestro software.
Using Maestro

Using the Maestro software, you can create and run SCEs, assess learners and adjust system controls.

**Note:** For optimal performance, Maestro should be the only software program running.

Starting a Simulation

Upon launching the Maestro app, the Home screen appears and users have the option to choose one of the following simulations types: Run On the Fly (Modeled), Run On the Fly (Manual) or Run an SCE.

Run On the Fly Simulations

The Run On the Fly (Modeled) or Run On the Fly (Manual) simulation options start a simulation without an SCE.

To begin a Run On the Fly simulation:

1. Tap one of the simulation types and select the **Gender** of the patient. The selected gender determines if the speech options will be in a male or female voice.

2. Tap **Start** to begin the simulation.

   From the Run screen, you can manually alter the patient’s status and adjust parameters as needed for specific situations. The functionality in this mode is similar to, and described in Run an SCE section of this user guide.

Run an SCE

From the SCE Manager, you can run various simulations.
To run an SCE:

1. From the Home screen, tap **Run an SCE**.

   The **SCE Manager** tab is selected by default and a list of available SCEs appears.

   **SCE Manager Screen**

   **Note:** Tap an SCE's title to view SCE details before launching. See View Details in the next section.

2. Tap the **Play** button to start an SCE.

   The Run screen appears and displays the Patient Baseline state.

3. Tap **Scenario** in the upper-right corner of the screen.
The list of scenario states appear. A scenario will remain in Patient Baseline until the Play button is tapped in another state.

4. Tap the Play button to apply a state to the running SCE.
Run Screen Features

When an SCE is started, the Run screen appears and displays a series of panels that group related controls and information. The content for each control is dynamic and varies whether you run scenarios in On the Fly mode or as an SCE.

Users can adjust the status of the patient while they proceed through a simulation using these controls.

Monitor Signals

The Monitor Signals tab gives users control over the values and signals that appear on the simulated patient monitor, TouchPro.

Tap Monitor Signals to adjust the controls for the simulator.
By default, all probes are on. When probes are turned off, it impacts different waveforms and numerical values on the patient monitor.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Setting the catheter placement to Atmosphere causes a flat line to appear, even when an override is used. Available catheters include:

- Arterial Catheter
- Central Venous Catheter
- PA Catheter

If the catheter placement is *None*, no trace appears at all.
Event Log

During an SCE, all changes (manual or detected by the system) to simulation settings, learner actions, and checklist results are recorded in the Event Log.

To access the Event Log, tap the **Events** button in the lower-left corner of the Run screen.

The event log records the time and details of instructor and learner actions, which are color coded by category.
In Manual SCEs, the medication information is tracked in the Event Log, but does not have an automatic effect on patient physiology.

Display Patient Records in TouchPro

You can display patient records in the TouchPro software while an SCE is running.

To display a patient record:

1. From the Maestro Run screen, click Records.

   The Patient Records list appears with all available patient records shown.
2. (Optional) To preview a patient record before sending to TouchPro, select the record and tap the Preview button.

3. Select a patient record and tap Send to TouchPro.

The patient record opens in TouchPro.

**Note:** Only one patient record displays at a time.

To stop displaying a patient record in TouchPro, on the patient record, tap Remove from TouchPro.

To close the Patient Record list, tap Records.

## Reset an SCE

Resetting an SCE brings the patient's initial status data back to its original status. The SCE time is unaffected. Reset data appears in the Event Log.

To reset patient data:

1. While running an SCE, tap the first bookmark on the timeline.

2. Tap Revert.
The patient returns to its original physiological state at the start of the SCE. The patient reset is indicated on the SCE timeline bar.
Changing Patient Status

You can adjust the patient status while an SCE is running by:

- Using one of the parameter panels on the Run screen to modify parameters. For more information, see Patient Status Display section of this user guide.
- Using the Conditions, Treatments, and Medications Quicklinks.
- Applying Scenario states.

Patient Status Parameters

From the Run screen, select a parameter icon to display the associated parameters panel for various body systems and features. To access a parameters panel, tap the appropriate icon or button for:

- Cardiovascular
- Respiratory
- Neurological
- Fluids
- Sounds
- Pulse
- Speech

Run Screen with Cardiac Parameters
**Types of Parameters**

There are two types of parameters: numeric and discrete.

Once a parameter is selected and set, the patient’s physiology changes according to the model for that parameter.

**Numeric Parameters**

To change numeric parameters, tap in the relevant field and enter a new value in place of the existing one. Or, use the slider to move through the range of parameter values until the numeric value is established.

In Manual mode, parameters exist for each of the monitored patient values.

In Modeled mode, there are a larger set of parameters that are either monitored patient values, or physiological model inputs. When users set or modify monitored patient values, it overrides the output of the physiological model. To return to a physiologically modeled value, tap the **Modeled** button and tap **Accept**.

Changing physiological model inputs indirectly impacts the output of the physiological model. When a modeled input is called a factor, it acts as a multiplier. For example, Heart Rate Factor 2.0 is two times the baseline Heart Rate.

**Discrete Parameters**

Discrete parameters let users choose the appropriate option from a drop-down menu or toggle switch.

The following image shows the Bronchial Occlusion parameter. The Bronchial Occlusion parameter is set using a discrete parameter switch that toggles between **OFF** and **ON**.

![Bronchial Occlusion Parameter](image)

Some parameters have two toggle switches or buttons, one for each side of the manikin.

When the “Apply to Both Eyes” parameter is set to ON, any change made to one side is automatically applied to the other side.
Changing a Patient’s Parameters

To change a patient's parameters:

1. Tap the appropriate parameters icon to view the parameter panel.

If an SCE is in Modeled mode, the parameters will display the physiological responses in real time. Otherwise, the parameters will be static until changed in Manual mode.

**Note:** Some simulators have **Basic** and **Advanced** tabs on the Respiratory and Cardiovascular panels. Basic parameters are shown by default. Tap the **Advanced** tab to display Advanced parameters.
2. Select the desired parameter. The Parameter Controls screen appears.

3. Set the new value and tap **Accept**.
Using Maestro

Using Quicklinks

Quicklinks allow the application of conditions, medications, and treatments during simulation. Once applied, conditions are reflected in the patient's physiology and logged. All medications and interventions are also logged, and most affect the patient's physiology.

The Conditions, Medications, and Treatment controls used most often can be set up as Quicklinks Favorites and will appear in alphabetical order at the top of the panel. This lets you quickly administer changes in patient status.

**Note:** Quicklinks can only be added while creating or editing an SCE.

To learn more about setting up Quicklinks, see *Runtime Configuration* section of this user guide.

**TIP:** Tap the appropriate icon to collapse or expand the control.

![Conditions Panel](image)
Conditions

Conditions are similar to scenario states and can contain multiple parameter changes. These quicklinks make it easy to change the patient's status.

To set parameters using the Conditions Quicklinks, tap **Conditions** icon. In the Conditions panel, tap the **Condition Quicklink** to apply it to the simulation.

To apply a condition that is NOT set up as a Quicklink Favorite:

1. Browse the panel to find the desired condition.

   Conditions are organized by categories. You can also list All Conditions by tapping **A-Z (All Conditions)** to browse by group in alphabetical order or use the Search feature to quickly find a specific condition.

2. Tap the name of the desired condition.

   The condition is applied to the patient.
Medications

To choose a medication using the Quicklinks:

1. In the **Medications** panel, tap one of the Quicklinks.

   ![Medications Panel]

   A menu appears and shows the available medications.

2. Tap a specific **medication** to choose a dose and route of administration.

   The Medication controls appear.

3. Tap the desired **Delivery Method** and select a pre-defined dose from the Amount menu, or choose Custom to enter a custom dose.

   **Note:** All administered medications are added to the **Event** log in both Manual and Modeled modes (unless labeled Log only), but medications only affect the patient's status if the simulation is in Modeled mode. For Modeled mode SCEs, the medication is also logged in the **Log** tab on the **Medications** panel.

To administer a medication that is NOT set up as a Quicklink Favorite:

1. From the Medications list, tap **A-Z (All Medications)** to browse all medications in alphabetical order or use the Search feature to quickly find a specific medication. Medications are grouped in the list by type below the **A-Z (All Medications)** list option.

2. Navigate through the menus to locate the desired medication. Tap the desired medication in the list.
The Medication controls appear. The delivery method and amount options, which include pre-defined doses and custom dose option, is displayed.

3. Select a dose option in one of two ways:
   - Under Delivery Method, choose a pre-defined dose and select an Amount.
   - Under Delivery Method, choose a pre-defined dose and from the Amount drop-down menu, select Custom.

4. Enter the custom amount and tap Administer.
The Medication Log

The Medication Log tracks the infusion of medication administered and its effect on patient status. The Medication Log is present in Modeled mode only.

To view the Medication Log:

1. From the Run screen, tap the Medications control.
2. Tap the Log tab.

The medications that have previously been administered appear in the Logged section of the screen. Medications that are currently impacting the patient physiology appear in the Active section of the screen.
Tap on an active medication to display medication information.

The normalized effector site concentration is shown next to each medication listing. This represents the amount of medication that is affecting the patient physiology.

**Reset a Medication**

To reset a medication:

1. From the Medication Log, tap an active medication.
2. From the medication information, tap **Reset**.

   The medication is cleared from the model and from the Medication Monitor.

   With continuous infusions, the amount infused goes back to zero, but the infusion continues.
Treatments

To apply an intervention using Quicklink Favorites:

1. Tap **Treatments** icon and select a treatment from the Quicklink Favorites.

To apply a treatment that is NOT set up as a Quicklink Favorite:

1. Tap **Treatments**.

Treatments are organized by type and all available treatments are listed under **A-Z (All Treatments)**.
2. Navigate through the menus to locate the desired treatment.

3. Select a treatment and tap **Apply treatment**.
Transitioning Scenario States

To move between scenario states from the Run screen:

1. Tap **Scenario** icon to expand the scenario panel.

2. Tap the **Play** button in the desired state to advance from the Patient Baseline state.

   To pause or continue a scenario, tap the **Pause** or **Play** button from the Scenario Management menu.
SCE Timeline Controls

The SCE timeline controls are located at the bottom of the Run screen.

**Timeline**

- The **Timeline** bar shows the amount of time that has elapsed and bookmarks that have been created.
- The **Marker** button creates a bookmark at the current point in the SCE. The marker can be used later to reset the patient’s physiology to what it was when the bookmark was created.
- The **Fast-Forward** button accelerates the SCE time to a 4:1 ratio.
- The **Pause/Play** button pauses the SCE time or starts the SCE if it has been paused. The **Pause/Play** button also returns the SCE time to normal speed after **Fast-Forward** has been selected.

**Using Bookmarks**

To annotate the timeline, tap the **Marker** button. A marker appears on the **Timeline** bar.

**Timeline with Bookmarks**

To return to the patient status at the time the marker was created, tap the marker on the timeline and tap **Revert**.

**Revert to Bookmark**

The patient’s status returns to the selected point in the timeline.

**Note:** The SCE time continues moving forward and does not reset to the marker time.
PATIENT DISPLAY

When you run an SCE, the patient's status appears.

Patient Status Display

Patient status display appears in the main frame on the Run screen. The status includes numeric data and waveforms.

From this screen, you can:

- Tap Alarms to mute or unmute alarm sounds.
- Tap Waveforms or numeric widgets to adjust parameters.
- Edit a layout.
Change the Patient Status Display

You can change the layout of the patient vitals display and save parameters as part of the layout.

To change the Patient Status Display:

1. In the Run screen, tap the **Patient Status** button.

![Patient Status Button]

The Edit Vitals Layout & Alarms screen appears.

2. Either begin modifying the baseline layout or tap **Load Saved Layout** to select another patient display layout to modify.

3. Drag and drop a waveform or numeric widget from the right panel to an available display in the left panel.

   Once in place, the Select Waveform or Select Numeric Widget screen appears.

4. Select or change the physiological parameter(s) as needed. Tap **Save**.
5. When the Edit Vitals Layout & Alarms screen appears either:
   - Tap **Accept** to update the layout without saving it.
   - Tap **Save to Library** to save the layout for future use.

**Alarm State**

When an alarm is not muted and a value reaches critical state, the associated widget flashes.

**Flags**

Blue, rotating flags indicate a value of the parameter is in transition. A yellow System Override flag indicates the value of the parameter has been overridden by the system due to a special condition (for example, Apnea, Non-pulsatile rhythm or Pulseless Electrical Activity.)
Editing Parameters

You can edit parameters in one of two ways:

- Parameter Editor
- Quick Edit

To edit parameter in the Parameter Editor controls:

1. Tap a waveform or vital sign widget to open the Parameter Editor controls.
2. Use the sliders, text fields, or (+) and (-) to adjust parameters.
3. Tap Accept.
To edit a parameter using Quick Edit:

1. Press and hold a waveform or vital sign widget until (+) and (-) icons appear over the widget.

2. Tap the plus or minus signs to adjust the parameter.

3. Click outside of the Quick Edit area to save the changes and close the editor.
THIS PAGE INTENTIONALLY LEFT BLANK.
MANAGING SCEs

The Maestro SCE Manager is where you can view and print information for all SCEs. You can also create, edit, copy, or delete custom SCEs and Learning Modules.

To access the SCE Manager screen, from the Maestro Home screen, tap SCE Manager.

SCE Manager Screen

The default screen shows Recently Used SCEs but you can easily locate any SCE and Module in the SCE Manager.

There are three ways to locate SCEs or modules from the SCE Manager screen:

- In the left column, tap either Favorites, All, Preconfigured SCEs, User-created SCEs or User-created Modules.
- In the Search field, type part or all of the name of an SCE or module.
- Tap the Sort by drop-down to filter the list by ascending or descending order.
Review an SCE

To review details about an SCE, tap on the name of an SCE, or tap the Gear icon and select Review from the drop-down menu.

The SCE Editor screen appears.
View SCE Details

From the SCE Editor screen, you can select a tab or panel to view details.

The SCE Editor screen is where users can enter specific details for custom SCEs.

For more information on entering SCE details into a new SCE, see Create a Custom SCE section of this user guide.
Managing SCEs

SCE Editor Navigation Tabs

- **Details**: Lists relevant information about the SCE. Allows access to the Overview, Learner, and Facilitator panels

- **Patient**: Describes the patient profile

- **Scenario**: Includes states pertaining to the SCE

- **Checklists**: Includes checklists related to learner milestones for the SCE

- **Patient Records**: Stores patient records including but not limited to:
  - Lab reports
  - X-rays
  - Medical history
  - Healthcare Provider’s orders
  - Handoff reports

- **Runtime Configuration**: Lists condition, medication, and treatment information

- **Preparation**: Lists recommended equipment and supplies needed to run the SCE

SCE Editor Panels

- **Overview**: Includes information about the SCE synopsis and descriptions of the states

- **Learner**: Displays learning objectives, performance measures for each state, and preparation questions

- **Facilitator**: Includes notes, debriefing points, teaching questions and answers, as well as clinical references about the SCE

Create a Custom SCE

You can quickly create an SCE by copying an existing SCE, or by creating a new SCE and entering all of the details. Custom SCEs can be used alone or in a Learning Module. For more information, see the Learning Modules section of this user guide.

**Note**: The Lock icon on any screen indicates the SCE was installed by CAE and cannot be edited or deleted.

Copy an SCE

When an SCE with specific physiological characteristics is needed for repeated use, create the SCE from an existing SCE.
To copy an SCE:

1. On the SCE Manager screen, tap the Gear icon on the right of the desired SCE.

   ![SCE Gear Drop-Down Menu Options](image)

2. Tap Copy.

   The Copy SCE screen appears and lists sections of the SCE you can copy.

   ![Copying SCE](image)

3. Select the elements of the SCE to copy. When finished, click Next. In the SCE Title field, enter a new SCE name.

4. (Optional) Assign the SCE to a Module using the drop-down menu.
5. Click **Copy**.

The new SCE is copied and available for selection from the SCE Manager.

**Note:** Overwriting an SCE will only impact the running SCE, not any other SCE copied from the same base patient.
Creating a New SCE

Creating a new SCE is a two-step process.

1. Create the SCE in the SCE Manager as described in this section.

2. Enter details about the SCE in the SCE Editor as described in Using the SCE Editor section of this user guide.

To create an SCE:

1. From the SCE Manager screen, tap **New SCE**.

   The New SCE screen appears.

   ![New SCE Window]

   2. Type a title for the SCE in the **SCE Title** field.

   3. (Optional) To add an SCE to a module, tap the drop-down arrow and select a module. Or, tap the + icon to create a new module.

   ![Select Module]
4. Type a name for the module in the Enter New Module Name screen and tap Add.

4. Type a name for the module in the Enter New Module Name screen and tap Add.

5. Complete the remaining fields in the New SCE screen or select options as required. When finished, tap Create.

The SCE Editor screen appears with the Details tab displayed.

6. In the Overview, Learner, and Facilitator panels, tap the Edit icons to enter additional information.

7. Tap the navigation tabs to enter additional details about the SCE as needed. To learn more, see Using the SCE Editor section.
Import or Export an SCE

SCEs can be imported from an external device or the hard disk drive where the SCE file is saved. The SCE file extension is *msce*.

To import from SCE Manager screen, tap the More drop-down menu and tap Import SCEs.

Note: The step-by-step instructions for importing SCEs and Learning Modules are located in Appendix E - Importing Learning Modules of this user guide.

To export an SCE:

1. In the SCE Manager, tap the gear icon next to the desired SCE.

2. Tap Export.

3. Select the desired location for the *msce* file in your File Explorer window and tap Save.

   The file is saved in the designated location. If using a tablet, the files can be exported to an external device via USB-C cable.
To view the PDF of an SCE:

1. Tap **View PDF**.

2. Select the desired location for the *msce* file in your File Explorer window and tap **Save**.

   The file is saved in the designated location. If using a tablet, the files can be exported to an external device via USB-C cable.
USING THE SCE EDITOR

Use the SCE Editor to review or manage any purchased, preconfigured SCEs and to complete or edit information for custom SCEs. From the SCE Editor screen, you can also view checklists, and patient records, or delete information as needed.

To access the SCE Editor, tap on the name of an SCE from the SCE Manager screen.

The buttons in the Navigation panel provide options to:

- Run the SCE.
- Edit the patient or scenario.
- Add checklists or patient records.
- Modify the runtime configuration including preparation information.

Some sections in the SCE Editor include a rich-text editor to allow free-form data entry.

**Note:** If the SCE is locked, you cannot modify or delete information.
Patient Profile

To edit the Patient Profile:

1. From the SCE Editor, in the Patient section, tap the Edit button.

The Patient Profile Editor appears.
2. Modify the patient's name, eye color, age, gender, weight, and height in the appropriate fields.

3. (Optional) Tap **Change Picture** to change the patient's picture.

4. Tap **Save**.

**IMPORTANT:** No part of the patient's profile can contain any special characters, such as / \ : * ? < > % | “
Setting a Patient’s Baseline

The patient baseline is the patient's initial status at the start of an SCE.

To set the Patient’s Baseline:

1. In the Patient section, tap the Edit button on the right of Baseline.
   The Patient Baseline Editor appears.

   ![Patient Baseline Editor]

   2. Set the Patient’s baseline status by modifying the desired parameters and tap Save.
      When the SCE begins, the Patient status reflects the selected baseline settings.

To use the text editor:

1. Where available, tap the Edit button.
2. Enter or edit information as needed.
Using the SCE Editor

**Note**: Text can be copied into the fields from Text Editor or Notepad only.

![Text Editor](image)

3. When finished, tap **Save**.

**Note**: Notes can also be added to each scenario state when editing a Scenario.

**Scenarios**

For any custom SCE, users can create scenarios, or if a scenario is not locked, users can edit a scenario.

You may edit scenarios to modify patient status from the Scenario Editor or Live Scenario Editor.

**Note**: The live editor allows edits to the scenario while running the simulation, and is only available when the optional Maestro Physiology feature is active.

To edit from the Scenario Editor:

1. From the SCE Manager screen, select an SCE to edit.
   
   The SCE Editor screen appears.

2. Tap the **Scenario** tab.

3. Tap the Scenario **Edit** icon.

   **Note**: If it is a brand new SCE, tap the **Open Scenario Editor** button to open the Scenario Editor.
The Scenario Editor appears.

![Scenario Editor](image)

**Scenario Editor**

4. Tap the **Gear** icon located on the side of a state to do one or more of the following:
   - **Rename**: to rename the state.
   - **Copy**: to copy the state.
   - **Delete**: to delete the state.
   - **Edit Parameters**: to edit the state parameters without jumping to the specified state.
   - **Add Transition**: allows transitions to be added from one state to another.
   - **Edit Note**: to add state notes.

To edit from the Live Scenario Editor:

**Note**: From the Live Scenario Editor, states can be added, modified and deleted.

1. From the Scenario Editor screen, tap **Live Scenario Editor**.

   The Live Scenario Editor screen opens.
2. Tap the Gear icon located on the side of a state. Then, tap one or more of the following:

   - **Add State:** to add new states.
   - **Restart Simulation:** to revert the simulation to the patient baseline.
   - Gear icon, located on the side of a state to do the following:
     - **Jump to State:** allows users to jump to the desired state. It is possible to perform a live edit, by selecting the Edit Live button. Once completed, parameter changes will be applied to the state. This option allows users to edit state parameters and see the resulting physiological impact on the patient.
     - **Rename:** to rename the state.
     - **Copy:** to copy the state.
     - **Delete:** to delete the state.
     - **Edit Parameters:** to edit the state parameters without jumping to the specified state.
     - **Add Transition:** allows transitions to be added from one state to another.
     - **Edit Note:** to add state notes.

### Add, Modify or Delete Scenario States

A scenario state is comprised of conditions and parameters. A state may also include automated transitions to other states and notes for the instructor.

For scenarios, users can:

- Create new states and options.
- Add conditions and parameters to a state, or copy a state into a new state.
- Modify or delete portions of a state such as parameters or transitions, or the entire state itself.
- Add and delete transitions.

### Add Scenario States and Parameters

You can add states, conditions, and parameters in the Scenario Editor or Live Scenario Editor.

To add a scenario state:

1. In the Scenario Editor or Live Scenario Editor, tap **Add State**.
2. In the window that appears, enter a name for the new state. Tap **Create**.
The State window appears, where you can add parameters to the state.

To add parameters in the Live Scenario Editor:

1. In the Live Scenario Editor, select the desired state, and then select **Jump to State**. All changes made to controls will be added to active state.

2. Tap the **Gear** icon and select **Edit Live**.

3. Add as many parameters as needed.

   Parameters appear consecutively within the state.

4. Move to different states to add or edit parameters as needed using the **Jump to State** feature. Repeat this step as needed through multiple states.

5. When finished, click **Return** to save and exit the editor.

   **IMPORTANT:** If the physiology of any parameter conflicts with other parameters, Maestro will retain the last parameter entered.

To add parameters in the Scenario Editor:

1. In the Scenario Editor, select the desired state.

2. On the right side of the screen, click **Edit Parameters**.

3. Add conditions or parameters as needed by selecting them from the list on the left side of the screen. Once added, they appear on the right side of the screen.

4. Tap **Save**.

**Modify or Delete Scenario States or Parameters**

To modify a scenario state:

1. In the Scenario Editor or Live Scenario Editor, select the desired scenario state. Then, Tap **Edit Parameters**.

2. Make necessary changes. Tap **Save**.

To delete a scenario state in the Scenario Editor or Live Editor, tap the **Gear** icon, then tap **Delete**.
To delete parameters:

1. In the Scenario Editor or Live Scenario Editor, tap the Information icon to expand the state.

2. Tap the Parameters tab. Tap the X icon next to the parameter to delete.

Add and Delete Transitions

To add transitions, the scenario must have both an original state and a state that results from the transition. Add or delete transitions from the Scenario Editor or Live Scenario Editor.

To add transitions:

1. In the Scenario Editor or Live Scenario Editor, tap the Gear icon next to the desired state.

2. Tap Add Transition.
The New Transition screen appears.

3. Select an option from the list of transition types, then select additional options as prompted.

   **Example**: If the administration of medication is a desired transition, select Medications, then select the desired medication from the list that appears.

4. Once the transition option is selected (for example Medication), enter the criteria, transition value, and state that results from the transition.

5. (Optional) Follow the same steps to make selections and assign values to the Treatment, Assessment, Vitals, Medication concentration, Fluids, Time in Scenario, and Time in State variable types.

6. When finished, tap **Save**.
To delete a transition in the Scenario Editor or Live Scenario Editor:

1. Tap the **Information** icon next to the state.

![Information Icon](image)

2. Select the **Transitions** tab, then tap the **Trash** button next to the transition to delete.

![Scenario Editor - Transition Tab](image)
Checklists

You can create new checklists or import existing checklists from the library.

To create a new checklist:

1. In the SCE Editor, tap the Checklists tab.
2. When the Checklists screen appears, tap Create New.

   The New Checklist screen appears.

3. Enter a name for the checklist in the Checklist Name field.
4. (Optional) Tap Add Checkbox to add a checkbox to the checklist.
   a. Enter a label name in the Checkbox Label field.
   b. (Optional) Tap Add Checkbox to continue entering labels as needed.
Using the SCE Editor

c. Tap Save.

5. (Optional) Tap Add Dropdown to add list items to the checklist.
   a. Enter a name for the dropdown list in the Dropdown Label field.
   b. Tap Add Option to provide items that can be selected from the dropdown list.
   c. Enter a name for the list item in the Dropdown Options field.
   d. (Optional) Tap Add Dropdown to continue entering dropdown lists as needed.
   e. Tap Save.

To import a checklist:

1. In the SCE Editor, tap the Checklists tab.

2. When the Checklists screen appears, tap Import from Library.

   The Import Checklist screen appears and displays all checklists from all SCEs in the system.

   ![Import Checklist Screens](image)
3. In the checkboxes on the right, select items to import.

4. Tap **Import**.

## Patient Records

Patient records can be uploaded into Maestro for display in the TouchPro software. Once uploaded, a patient record is available for use with the SCE.

**Note:** A single patient record file cannot exceed 20MB.

Maestro can store up to 32GB of patient record files. To ensure adequate space, delete patient records that are no longer needed.

To access a patient record:

1. From the SCE Editor screen, tap the **Patient Records** tab.

   The Patient Records list appears with all available patient records shown.

2. (Optional) To preview a patient record before sending to TouchPro, select the record, and tap the **Preview** button.

3. Select a patient record, then tap **Send to TouchPro**.
Upload Patient Records

You can upload the following file types:

- GIF, JPG, PNG, and XPS images
- MPEG and MOV videos
- PDF documents
- MP3 audio Files

To upload a patient record:

1. In the SCE Editor, tap the Patient Record tab.
2. In the screen that appears, tap Patient Files > Add File.

The New Patient File screen appears.

3. Click Upload. Select the desired file and tap Open.
4. When the file name and description appear, modify as needed in the text fields to reflect the desired file name and description.
5. Tap Create.

To view a patient record, select the record in Patient Records.
Edit or Delete Patient Records

You can only change the name or description of the patient record. You cannot edit the content of the record from the Patient Record tab.

To edit a patient record name:

1. From the list of Patient Files, tap the Gear icon next to the desired file.
2. Tap Edit. Change the Name or Description as needed.
3. Tap Save.

To delete a patient record:

1. From the list of Patient Files, tap the Gear icon next to the desired file.
2. Tap Delete.
3. When the message appears to confirm your selection, click Delete.
Using the SCE Editor

Runtime Configuration

Tap **Runtime Configuration** to access the Condition Setup screen. From the Quicklinks Setup screen, conditions, medications, and treatments can be preconfigured for the SCE by creating Quicklinks.

To navigate through available conditions, medications, and treatments, tap the **Conditions**, **Medications** and **Treatments** buttons.

![Runtime Configuration Screen](image)

To create a Quicklink Favorite, select a quicklink from the **Conditions**, **Medications** or **Treatments** lists.

![Creating a QuickLink Favorite](image)

To remove a Quicklink Favorite, deselect the option.
Preparation

From the Preparation tab, users can create a list of equipment and supplies, or notes about preparing the manikin for the SCE.

To create a list preparation items:

1. From the SCE Editor, tap the Preparation tab. Tap either Equipment & Supplies or Manikin Setup.
2. Tap the Edit button and enter items.
3. Tap Save.
LEARNING MODULES

Learning Modules are comprised of multiple SCEs. You can import or delete existing Learning Modules, or create new Learning Modules in Maestro.

Import a Learning Module

To import a Learning Module in Maestro:

1. From the SCE Manager screen, tap More > Import Module.

2. Locate the correct learning module file on the local or external storage where the learning module is located. The file extension is *mlm*.

3. Select the file. Tap Open.
Delete a Learning Module

To delete a Learning Module from Maestro:

1. From the SCE Manager screen, tap More > Manage Modules.

   Example of Manage Modules Screen

2. Tap the Trash icon next to the module you want to delete.

3. When the message appears for you to confirm your selection, tap Delete All.
   All of the SCE’s in the learning module will be deleted.
Create a Learning Module

To create a Learning Module:

1. From the SCE Manager screen, tap **New SCE**.

   The New SCE screen appears.

   ![New SCE Screen](image)

2. Type a title for the SCE in the **SCE Title** field.
3. To select a module to add the SCE to, tap the drop-down arrow, then select a module. Or, tap the + icon to create a new module.

![Select Module](image)

- If creating a new module, type a name for it in the Enter New Module Name screen. Then, press Add.

![New Module Name Screen](image)

4. Complete the remaining fields on the New SCE screen or select options as required.

5. Tap Create.
Using the Intercom

Using the Intercom

Maestro provides an intercom feature which allows facilitators to communicate with learners and to speak as the patient. Users can speak through the intercom using a headset or by speaking directly into the tablet's microphone. Users can initiate 1-way and 2-way communications or mute all audio communications.

Communicate with Participants

To use the intercom:

1. While running an SCE, tap **Intercom** in the left panel to expand intercom options.

2. Once expanded, tap **Connect** located below the **Intercom** icon.
The Connect Window appears.

Connect Window

3. Tap in the text field to access the keyboard and enter in the desired name for the Intercom.

4. Tap Connect.
Once connected, the Intercom Tools menu appears.

5. Tap **Participants** to begin 2-way communications with all participants in the simulation.

   **Note:** Tap and hold the **Participants** button to initiate communications only while pressing the button. Communication ends when the button is released.

Additional participants may join the network. For example, another facilitator is able to join the network by launching a second instance of Maestro via tablet or PC. Then, they can then use the Intercom controls to talk as the manikin or talk to the primary facilitator.

### Speak as the Patient

On the Intercom Tools menu, tap and hold the **Patient** button to emit your voice through the manikin's vocal speakers. Release the button to mute your voice.

**Note:** You will continue to hear the participants via the manikin's microphone.

To mute all communications between facilitator and participants, on the Intercom Tools menu, tap **Mute All**.
Settings allow users to control how the intercom functions.

1. On the Intercom Tools menu, tap **Settings**.

   The Settings pane appears.

2. In the Settings panel, users can:
   - Tap **Disconnect** to disconnect from the manikin's intercom functions.
   - Use the slider to adjust your microphone volume.
   - Tap the **Mute** icon to mute incoming communications from the manikin's microphone.

3. To exit, tap the **X** icon.
Administrative Tools

The Maestro software includes administrative tools to access and manage system settings, preferences, and additional information such as historical data about simulation sessions.

![Gear Icon](image)

Access Administrative tools via the **Gear** icon located on the upper-right corner of the Home page.

**Gear Icon**

Select one or more of the following to access system settings:

- **System**: Access information about the Maestro software version, the type of simulator, along with **Preferences**, **License Manager** and **Maintenance**
- **Select Simulator**: Change the simulator (only available when using Maestro Standalone)
- **Language**: Change the Maestro language

**System Administration**

From the System Administration screen, you can access system information, set preferences, manage licenses and maintenance information for Maestro.

**System Information and Settings**

To access the System Settings, from the Home screen, tap the **Gear** icon. Then, select **System**.
System Administration

From this screen, you can select:

**About**: to view simulator type, software version and system configuration.

Under Data Management, you can backup and restore data through the **Backup Data** and **Restore Data** buttons respectively.

**CAUTION**: Restoring data permanently replaces all current data on the device. Make sure all users are disconnected from simulators before proceeding.

**Preferences**: to change settings to different software features.

**General Preferences**: to adjust language, units of measure (metric or imperial), pressure and CPR settings.

**License Manager**: to access license information. From here, you can start a trial of the Maestro software, and activate or deactivate the license.

**Maintenance**: to access maintenance options, including simulator configuration and connected devices.

**Sim Lab**: to view the configured simulators and add additional simulators for MultiSim functionality. See *Appendix D - Maestro MultiSim* for more information.

Specify a Default Simulator

If using Maestro Standalone software, you can select a simulator and set it as the default when using Maestro.

To change the simulator type:
From the Home screen, select the **Gear** icon and tap **Select Simulator**.

![Select your simulator](image)

**Select Simulator Screen**

(Optional) Select **Set as default**.

Tap **Apply**.

**Set the Default System Language**

To set Maestro's language:

From the Home screen, click the **Gear** icon.

![Select Language](image)

**Select Language Screen**

Select the desired language. Tap **Accept**.

**Note:** Language can also be set from System > Preferences.

**Additional Administrative Tools**

You can access the CAEMaestro User Guide, support information, or system information.

From the Home screen, click the **Gear** icon, and then select one of the following:
User Guide: to download the user guide (English version). Go to: www.caehealthcare.com and click the Support link.

Support: for CAE Support contact information.

About: to access information about the Maestro software version, the type of simulator and the serial number.

SCE Management

The SCEs in Maestro are managed in the SCE Manager screen. For more information on managing and modifying settings of the SCEs using the SCE Manager, see Using Maestro section of this user guide.

Session History - History Screen

The History screen displays a log of simulation event data.

History Log Options

To view session data:

Tap the History tab.

Tap the Gear icon for the desired simulation session, then select View Session Data.
History Log Options

The Event Log, Physiological Data, and CPR Data appears. Click the Physiological Data for a session to view all physiological data that occurred during the SCE.

You can export data to a CSV or MSS file (session file in Maestro format) and store it on an external device.

To export data from the History screen, tap the Gear icon for the desired simulation session, then tap Export.
USING THE TOUCHPRO PATIENT MONITOR

TouchPro allows you to view the patient’s physiology, expressed in waveforms and numeric values. This section will show you how to access and configure the TouchPro software.

The software can be used from the Instructor Tablet, or on another computing device, provided it has joined the simulator’s wireless network and meets the minimum system requirements.

Access the TouchPro Patient Monitor

The TouchPro Patient Monitor software is compatible with computers that have touch-screen capabilities.

To run TouchPro, the Instructor Tablet (or other computing device) must be connected to the simulator’s network.

**Note:** An SCE must be running in the Maestro software for any physiological data to appear in TouchPro. TouchPro can only show one patient at a time.

To launch TouchPro from the Instructor Tablet:

1. With an SCE running, tap the **CAETouchPro** icon in the upper-right corner of the screen.
Running TouchPro From Your Own Computing Device

If you want to use your own computing device to run the TouchPro software, it must meet the system requirements and be joined to the simulator network prior to use.

The simulator and Instructor Tablet form a local area network with static IP addresses. Refer to the following instructions or contact your system administrator to configure the network properties and connect the TouchPro software.

To connect to the TouchPro software using your own a computing device:

1. Ensure the Instructor Tablet is connected to the simulator network.
2. Unlock the Instructor tablet.
3. Tap **Apps > Settings > Connections > Wi-Fi.**
4. Tap **ADVANCED** link in upper, right corner of the screen.
5. Write down the IP Address at the bottom of the window

To launch TouchPro:

1. Power on the computing device with TouchPro installed.
2. Open a web browser, and then enter the **IPv4** address in the address field.
3. When prompted, download and install the Maestro application, then click on the TouchPro icon on desktop.

Configure TouchPro

The vital signs and colors, alarm suspension time, alarm ranges, and audible settings can be configured from the Settings panel.

To access the Settings panel:

1. Tap **Settings** in the bottom, right corner of the screen

   The Settings menu appears.

2. Tap the **Layout** tab.

3. From the Layout that appears, select a Layout and tap **Edit**.

![Settings Window](image)
The Layout Edit window appears.

4. Tap a signal to edit its parameters.

The Insert a parameter window appears.

5. Adjust the signal's **Color**, **Alarm**, and **Graph Scale** parameters as needed.

6. Select a parameter to insert it in the place of the selected parameter.
7. When finished, tap the X in the upper-right corner to close the window.
   The Layout Edit window reappears.

8. Use the plus (+) buttons to add waveforms to the layout.

   ![Layout Edit Window]

   TouchPro adds a line to the Layout.

9. Tap the new line to open the Insert a Parameter window.

10. Select the parameter to display on the new line.

11. Set the parameter's **Color** and **Alarms**. When finished, close the screen.

12. Tap **Done** to close the window.
   The Settings Layout Edit window opens.

13. Tap **Edit** to resume editing the layout.

14. Tap **Save As** to save the layout.

15. Type a name for the layout, then tap **Save**.
Sounds

To silence all sounds, click the **Mute** button in the bottom-left corner of the screen.

To set up the audio for TouchPro:

1. Tap the **Settings** button in the bottom, right corner of the TouchPro screen.
2. From the Settings window, tap the **Audio Setup** tab.

3. (Optional) Select a waveform to set it as the pulse sound trigger.
4. (Optional) Select an Alarm Suspension Time to disable the selected waveform for an indicated amount of time.
5. When finished, tap **X** to close the window.
NIBP Cycling

When non-invasive blood pressure (NIBP) is displayed, the patient’s NIBP can be updated at specified intervals using NIBP Cycling.

To set NIBP cycling:

1. Tap **Settings** in the bottom-right corner of the screen.
2. From the Settings menu, tap **NIBP Cycling**.
   
The NIBP Cycling window appears.

   ![NIBP Cycling Window](image)

3. Select the desired interval for the cycling.

   **Note:** Custom cycling is also available.

Manual NIBP

To display the patient’s current NIBP, from the TouchPro controls, tap the **Manual NIBP** button.

![TouchPro Controls](image)

   **Note:** Manual NIBP can be used at any time during cycling, however it turns off auto-cycling.
Change the TouchPro Language

To change the default language of the software:

1. Tap **Settings** in the bottom-right corner of the screen.

2. From the Settings menu, tap the **Language** tab.
   
   The Language Selection window appears.

3. Select a language.
   
   The TouchPro software changes to the selected language.
Select a Preconfigured Layout

These are the preconfigured CAE Healthcare Layouts:

- **ICU-Arterial Line Only** - preconfigured with waveform and numeric readouts for ECG Lead II, ECG Lead V, ABP, Pleth, and a numeric readout for Body Temperature

- **EMS-ED-Telemetry** - preconfigured with a waveform and numeric readout for ECG Lead II and numeric readouts for SpO₂, and NIBP (noninvasive blood pressure)

- **ICU-OR No CVP** - preconfigured with waveform and numeric readouts for ECG Lead II, ECG Lead V, ABP, PAP and Pleth, and numeric readouts for NIBP, Blood Temperature, and Body Temperature

- **ICU-OR** - preconfigured with waveform and numeric readouts for ECG Lead II, ECG Lead V, ABP, PAP, CVP and Pleth, and numeric readouts for NIBP, Blood Temperature, and Body Temperature

- **Saturation-Pulse** - preconfigured with numeric readouts for SpO₂ and pulse

To select a preconfigured layout:

1. Click the **Layout** dropdown menu in the upper-right corner of screen.

   ![TouchPro Layout Dropdown Menu](Image)

   The TouchPro Settings menu appears.

2. Select a layout.
12-Lead ECG

To view a 12-lead ECG report:

1. Tap the **12-Lead ECG** on the screen.

The report appears.
2. (Optional) To view the full screen, tap the **Full Screen** button bottom-right corner of the 12-lead ECG report. Then, tap **Return** to return to the inset view.

3. Tap **Print** button to print the report.

   The Select a destination window appears.

4. Tap a new print destination.

5. When the newly selected destination appears, tap **Print** to print the report.
Patient Record

To view Patient Records:

1. Tap **Patient Record** in the lower-left corner of the screen.

   The Patient Records window appears.

   ![TouchPro Patient Records Window](image)

This information provides access to the same Patient Files, History, Hand Off Record, and Orders information contained in Maestro.

**Note:** For this information to be visible in TouchPro, the facilitator must send it from the Maestro software.
Snapshot

The snapshot tool lets you capture an image of data on the screen, and then save it to your laptop or tablet. You might do this if you are connected to a wireless network where you cannot print a report.

To capture an image:

1. Tap **Snapshot** at the bottom of the screen.

   The Snapshot window appears showing the live date you want to capture.

![Snapshot Window]

2. To take another snapshot, tap the **Capture Snapshot** (camera) button at the bottom-right corner of the screen.

3. (Optional) Tap the **Expand** button at the bottom, right corner of the screen to open it to a full screen view.
THIS PAGE INTENTIONALLY LEFT BLANK.
APPENDIX A - PARAMETER DESCRIPTIONS

The Maestro software has a number of parameters that control the patient status and software-controlled features of the simulator.

The parameters are grouped by category: Cardiac, Respiratory, Neuro, Fluids, Sounds, and Pulse.

The following is a brief description of each parameter. Each parameter description lists the default settings for the default baseline as well as the ranges and/or controls for all patients.

Cardiovascular: Basic Parameters

Arterial Blood Pressure

The Blood Pressure parameter is used to set the value of the blood pressure. The systolic and diastolic blood pressures can both be set to fixed numeric values, regardless of interventions performed. The set change can also be programmed to occur over time using the onset control.

Default: 116/77

Range:

° Systolic: 0 mmHg - 300 mmHg
° Diastolic: 0 mmHg - 300 mmHg

Central Venous Pressure (CVP)

The CVP parameter is used to set the CVP baseline and atrial contraction amplitude to fixed numeric values. Once set, intravascular volume changes have no effect on the CVP. In addition, once an override is applied, changes in tidal volume have no effect on the CVP waveform with the exception of an apneic patient where the minimum and maximum would be the same value since there is no inspiration or expiration. Depending on the volume status of the patient, the minimum/maximum value can be shifted up or down.

The available CVP controls are as follows:

* Minimum Diastolic: Baseline of the CVP at the end of an inspiration
* Maximum Diastolic: Baseline of the CVP at the end of an exhalation
* Pulse Amplitude: Size of the CVP wave during atrial contraction

For the override to take effect, the Central Venous Catheter must be set to the Intrathoracic Vein.

For example, with the minimum diastolic set to 5 mmHg, maximum diastolic set to 15 mmHg and pulse amplitude set to 2 mmHg, the CVP baseline is 15 mmHg, dipping to 5 mmHg with each
inhalation, and the amplitude of the wave is 2 mmHg with each atrial contraction. The CVP baseline remains the same even in the event of intravascular volume changes and the depth of each dip due to inhalation remains at 5 mmHg even in the event of tidal volume changes. However, if the respiratory rate increases or decreases, the frequency of the dips will show a corresponding increase or decrease. The set change can also be programmed to occur over time using the onset control.

**Default:**
- Minimum Diastolic: -2 mmHg
- Maximum Diastolic: 2 mmHg
- Pulse Amplitude: 3 mmHg

**Range:**
- Minimum Diastolic: -10 mmHg - 25 mmHg
- Maximum Diastolic: -10 mmHg - 25 mmHg
- Pulse Amplitude: 0 mmHg - 50 mmHg

### Pulmonary Artery Pressure (PAP)

The **PAP** parameter is used to set the pulmonary artery pressure. The systolic and diastolic pressures can both be set to fixed numeric values, regardless of interventions performed. The set change can also be programmed to occur over time using the onset control.

**Default:** 18/6

**Range:**
- Systolic 0 mmHg - 50 mmHg
- Diastolic 0 mmHg - 50 mmHg

### Pulmonary Capillary Wedge Pressure (PCWP)

The **PCWP** parameter is used to display the patient’s pulmonary capillary wedge pressure. It is used to simulate the pressure as measured by wedging a pulmonary catheter with an inflated balloon into a small pulmonary arterial branch. The set change can also be programmed to occur over time using the onset control.

**Default:** 6 mmHg

**Range:** -10 mmHg - 100 mmHg
Appendix A - Parameter Descriptions

Heart Rate
The Heart Rate parameter is used to set the heart rate to a given (fixed) number of beats per minute. Once the heart rate is set to a numeric value, administered drugs or intravascular volume changes have no effect on the heart rate. Use this parameter to “fix” or set the heart rate to a specific number.

Default: 71 bpm
Range: 30 beats per minute - 220 beats per minute

Cardiac Output
The Cardiac Output parameter displays the volume of blood pumped by the heart per minute. Cardiac Output is a function of heart rate (the number of heart beats per minute) and stroke volume (the volume of blood pumped out of the heart with each beat). Cardiac Output does not affect the rest of the physiology. For example, if cardiac output is set to zero, it will be shown on the TouchPro as zero, but the patient will still have a blood pressure and pulses.

Default: 5.2 L/min
Range: 0 L/min - 30 L/min

Cardiac Rhythm
The Cardiac Rhythm parameter is used to change the patient’s underlying cardiac rhythm displayed on the Patient Status Display or TouchPro patient monitor. To change the cardiac rhythm, click the Cardiac Rhythm parameter and select the desired rhythm from the available list. If a number appears following the cardiac rhythm on the list, this overrides the heart rate to the rate indicated.

Default: Sinus
Options:
A
Asystole
Atrial Enlargement, Left
Atrial Enlargement, Right
Atrial Fibrillation
Atrial Flutter
Atrial Tachycardia
AV Block, First-Degree
AV Block, Second-Degree, Mobitz I
AV Block, Second-Degree, Mobitz II
Appendix A - Parameter Descriptions

AV Block, Third-Degree
AV Block, Third-Degree (Wide Complex)

B
Bundle Branch Block, Incomplete Right
Bundle Branch Block, Left
Bundle Branch Block, Right

H
Hypercalcemia
Hyperkalemia (Mild)
Hyperkalemia (Moderate)
Hyperkalemia (Severe)
Hypertrophy, Biventricular
Hypertrophy, Left Ventricular
Hypertrophy, Right Ventricular

Appendix A - Parameter Descriptions

Pulseless Electrical Activity

The **Pulseless Electrical Activity** parameter triggers a clinical condition characterized by unresponsiveness and lack of palpable pulse in the presence of organized cardiac electrical activity. It is either ON or OFF.

**Default:** OFF

PVC Probability

The **PVC Probability** parameter represents the percentage of cardiac cycles containing a premature ventricular contraction (contraction of the ventricles that occurs earlier than usual due to abnormal electrical activity of the ventricles).

The **PVC Probability** is used to set the frequency of PVCs within any cardiac rhythm. The set change can also be programmed to occur over time using the onset control.

**Default:** 0

**Range:** 0% - 90%

Ventricular Escape Rate

The **Ventricular Escape Rate** parameter is used to set the rate of ventricular escape beats. Ventricular escape rate does not affect the rest of the physiology. The set change can also be programmed to occur over time using the onset control.

**Default:** 30 bpm

**Range:** 10 to 50 bpm

Hemoglobin

The **Hemoglobin** parameter is used to set a fixed hemoglobin value. Hemoglobin does not affect the rest of the physiology. The value set will be shown on the Touch Pro if selected in one of the numeric fields.

**Default:** 14.4

**Range:** 10.0 g/dL - 20.0 g/dL

Respiratory: Basic Parameters

Apnea

The **Apnea** parameter triggers a clinical condition characterized by no spontaneous breathing. Lung sounds and vocal sounds will cease when apnea is enabled. It is either ON or OFF.

**Default:** OFF
Appendix A - Parameter Descriptions

Bronchial Occlusion (Left and Right)

Turning on the **Bronchial Occlusion** parameter completely obstructs the right or left bronchi, simulating a lower airway obstruction (e.g., mucus plug).

Right and left bronchi can be occluded individually.

Improper intubation creates a mainstem occlusion, yielding an inability to ventilate the lungs. However, the right and left bronchi are not occluded individually.

**Default:** OFF

Respiratory Rate

The **Respiratory Rate** parameter is used to set the respiratory rate to a given number of breaths per minute. The patient continues to breathe at the set number of breaths per minute, regardless of the arterial oxygen or carbon dioxide levels.

For example, when the respiratory rate is set to 10 breaths per minute, the respiratory rate remains at 10 breaths per minute, regardless of arterial oxygen or carbon dioxide levels.

**Default:** 11  
**Range:** 0 breaths per minute - 40 breaths per minute

SpO₂

The **SpO₂** parameter is used to override the normal pulmonary circulation and set the **SpO₂** at a fixed numeric value, regardless of the oxygen applied.

**Default:** 98%

**Range:** 0% - 100%

EtCO₂

The **EtCO₂** parameter is used to set the end-tidal CO₂ to a fixed numeric value, measured in mmHg, regardless of the minute ventilation. The end exhalation point of the capnogram waveform will also reflect the set end-tidal CO₂ value. Setting the **EtCO₂** has no effect on the arterial carbon dioxide values (PaCO₂), respiratory rate or tidal volume.

For example, when the **EtCO₂** is set to 50 mmHg, the numeric end-tidal CO₂ will display a value of 50 mmHg and the capnogram waveform rises to an end-tidal of 50 mmHg. However, the respiratory rate and tidal volume will remain the same unless the Respiratory Rate and/or the Tidal Volume parameter(s) is adjusted.

**Default:** 38 mmHg  
**Range:** 0 mmHg – 100 mmHg
Tidal Volume

The Tidal Volume parameter is used to set the tidal volume to a given volume per breath. Once Tidal Volume is set to a numeric value, arterial oxygen and carbon dioxide values have no effect on the tidal volume.

For example, with the tidal volume set to 600 mL in the adult simulator, the tidal volume remains a constant (set) 600 mL even in the event of falling arterial oxygen levels. In such situations, the patient can only respond to arterial oxygen or carbon dioxide levels by altering the respiratory rate.

Default: 500 mL
Range: 0 mL - 2500 mL

I to E Ratio (1:X)

The I to E Ratio (1:X) parameter can be used to change the ratio of inspiratory time:expiratory time (I:E). The I to E Ratio does not affect physiology. The set change also be programmed to occur over time using the onset control.

Default: 2.0
Range: 0.5 - 7.0

pH

Use the pH parameter to set a fixed pH value. The pH does not affect the rest of the physiology. The value set will be shown on the patient monitor if selected in one of the numeric fields. The set change can also be programmed to occur over time using the onset control.

Default: 7.45
Range: 6.9 - 7.9

Fraction of Inspired O₂ (FiO₂)

This parameter is used to simulate changes in the FiO₂, such as would occur with the administration of supplemental oxygen. This parameter does not affect the rest of the physiology.

Default: 21%
Range: 0% - 100%
Respiratory: Pleural Space

Intrapleural Volume (Vol): (Left and Right)

The *Intrapleural Vol* parameters allow intrapleural volume to accumulate, for example, as happens during pneumothorax, hydrothorax or hemothorax.

To simulate a pneumothorax, set the corresponding *Intrapleural Vol* to a value greater than 0 mL. Breath sounds are automatically diminished on the appropriate side due to decreased ventilation of the affected lung.

- **Default:** 0 mL
- **Range:** 0 mL - 2500 mL

Neurological

Intracranial Pressure (ICP)

The ICP parameter is used to set the ICP displayed as a numeric value on the Patient Status Display and on the TouchPro monitor.

- **Default:** 9.4 mmHg
- **Range:** 0 mmHg - 65.0 mmHg

Temperature: Body

The temperature measured at the body surface can be set using this parameter and can be displayed on the Patient Status Display and TouchPro software.

The body temperature is not linked to the physiologic models. However, changes can be made “on the fly” or scripted using the Scenario Designer. The set change can also be programmed to occur over time using the onset control.

- **Default:** 36.5°C
- **Range:** 32.0°C - 42.0°C
Temperature: Blood

The arterial blood temperature can be set using the Temperature: Blood parameter. The arterial blood temperature can then be displayed on the Patient Status Display and TouchPro software. The set change can also be programmed to occur over time using the onset control.

- **Default**: 37°C
- **Range**: 32.0°C - 42.0°C

Fluids

There are two categories of fluids: BLEEDING and INFUSION.

**BLEEDING**

*Fluid Loss Blood*

When used, the Fluid Loss Blood parameter reflects a decrease in total blood volume. Blood loss proportionally decreases both the red blood cell volume and the plasma volume according to the current hematocrit.

- **Range**: 0 mL - 60000 mL

*Fluid Loss Plasma*

When used, the Fluid Loss Plasma parameter reflects a decrease in plasma volume. Plasma loss decreases the plasma volume without changing the red blood cell volume. It refers collectively and generically to all fluid losses, including evaporative, transcellular, bowel and third space fluid losses.

- **Range**: 0 mL - 60000 mL

**INFUSION**

*Colloid Infusion*

When used, the Colloid Infusion parameter reflects an addition to the plasma volume without changing the red blood cell volume. Colloids include modified fluid gelatin starch solutions, dextran and human albumin.

- **Range**: 0 mL - 60000 mL
Appendix A - Parameter Descriptions

Crystalloid Infusion

When used, the Crystalloid Infusion parameter reflects an addition to the plasma volume without changing the red blood cell volume. The term crystalloid is used to describe salt solutions for infusion (e.g., normal saline, dextrose in water, Ringer's Lactate).

Range: 0 mL - 60000 mL

PRBC Infusion

Packed red blood cells are a preparation of 70% red blood cells and 30% liquid plasma, often administered in severe anemia to restore adequate levels of hemoglobin and red cells without overloading the vascular system with excess fluids.

Range: 0 mL - 60000 mL

Whole Blood Infusion

The term whole blood is used to refer to blood that has not been separated into its various components. It represents a preparation of 40% red blood cells and 60% liquid plasma.

Range: 0 mL - 60000 mL
Appendix A - Parameter Descriptions

Sounds

A variety of simulated sounds are available to create a realistic experience. Click the Sounds button on the Run screen to access the Sounds controls.

Heart Sounds

Heart sounds can be adjusted by clicking on the Sound icon on the Run screen. When the Sounds panel appears, select Heart Sounds. The Heart Sounds menu will appear.

Independent control of the type and volume of heart sounds may be selected in each anatomical region.

Type:

- Aortic
- Mitral
- Pulmonic
- Tricuspid

To affect the heart sounds simultaneously in all anatomical regions, select All and the desired sound.

Default: Normal

Type:

- Normal
- S3
- S4
- S3 and S4
- Early Systolic Murmur
- Mid Systolic Murmur
- Late Systolic Murmur
- Pan Systolic Murmur
- Late Diastolic Murmur

Note: The volume control slider can be used to adjust the amplitude of the sound.

Lung Sounds

Normal and abnormal breath sounds are selected using this parameter. Breath sounds are synchronized with ventilation of the left and right lungs.
Breath sounds can be adjusted by clicking on the Sound icon on the Run screen. When the Sounds panel appears, select Lung Sounds. The Lung Sounds menu will appear.

Independent control of the type and volume of heart sounds may be selected in each anatomical region.

**Type:**
- Left Upper
- Left Lower
- Right Upper
- Right Lower

To change breath sounds, select the desired sound from the Lung Sounds menu.

**Default:** Normal

**Type:**
- Normal
- Wheezing
- Crackles
- Rhonchi
- Diminished
- Gurgling
- Pleural Rub

**NOTE:** The volume control slider can be used to adjust the amplitude of the sound.
Bowel Sounds

Bowel sounds can be adjusted by clicking on the Sound icon on the Run screen. When the Sounds panel appears, select **Bowel Sounds**. The Bowel Sounds menu will appear.

**Normal, Hypoactive, Hyperactive** and absent bowel sounds (**None**) are selected using this parameter.

**Type:**
- Normal
- Hypoactive
- Hyperactive

Independent control of the type and volume of bowel sounds may be selected in each anatomical region.

**Locations:**
- Left Upper
- Right Upper
- Left Lower
- Right Lower

To affect the bowel sounds simultaneously in all anatomical regions, select **All Bowel Sounds** and the desired sound.

**Default:** Normal

**Note:** The volume control slider underneath each area may be used to adjust the amplitude of the sound. The volume control slider is only enabled while connected to a simulator.
Appendix A - Parameter Descriptions

Vocal Sounds

Vocal sounds are selected using this parameter.

Vocal sounds can be adjusted by clicking on the Sound icon on the Run screen. When the Sounds panel appears, select **Speech**. The Vocal Speech Sounds menu will appear.

**Default:** None

**Type:**

- None
- Gagging
- Gasping
- Groaning
- Long Loud Cough
- Long Soft Cough
- Crying
- Wheezing
- Mumbling

**Note:** The volume control slider can be used to adjust the amplitude of the sound.
Appendix A - Parameter Descriptions

Pulses

All pulses are enabled by default, unless altered by an SCE. To change a pulse setting, tap the Pulse icon on the Run screen. Tap the desired pulse location on the image.

<table>
<thead>
<tr>
<th>Pulse</th>
<th>Default</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>

<td>ON</td>
<td>Not Applicable</td>
</tr>
<tr>
<td>Radial Right Deficit</td>
<td>90 mmHg</td>
<td>0 - 300</td>
</tr>
</tbody>
</table>

The pulse can be turned ON or OFF.

The pulse intensity can be set to:

° Absent
° Weak
° Normal
° Bounding

The pulse deficit can be changed from default to another value. When the systolic pressure falls below the set pulse deficit, the pulse will turn off.
Speech

Speech sounds include a male or female voice that can utter pain rating indicators from 0 to 10, various phrases and a series of other utterances. Unlike Vocal Sounds, Speech Sounds only play once.

To play a Speech sound, turn on the **Speech Sounds Controls** button. Select the desired sound.

The replay the last sound, click the **Play** button.

**Default:** OFF.

APPENDIX B - CONDITION GUIDELINES FOR PROGRAMMING JUNO WITH MAESTRO

This section is intended to help you select conditions to achieve desired vital signs within each programmed state. All four conditions should be programmed into each state in the order presented below:

• Respiratory: Desaturation
• Cardiovascular: Blood Pressure
• Cardiovascular Heart Rate
• Respiratory: Respiratory Rate

The software is physiologically driven. When using multiple conditions (for example, Desaturation + Hypertension + Tachycardia + Tachypnea), physiological regulatory mechanisms such as the baroreceptor reflex and ventilatory control cause compensatory changes within parameters. To achieve the desired vital sign, select one condition level, above (greater) or below (less), to achieve the desired physiological effect.

### Respiratory: Desaturation

Appendix C - Medication Information

The following table describes the medications available for administration in the Maestro software. Each medication is listed along with:

- Any effects on the patient’s physiology (modeled or log-only)
- The medication category
- The predefined dosage choices
- The units used for custom dosages
- The route of administration.

When a medication has more than one possible route of administration, it is listed on a separate row for each route.

APPENDIX D - CAE MAESTRO MULTISIM

MultiSim allows you to control multiple, synchronized CAE Juno simulators from a single instructor device.

Notes:

- Checklists and the intercom features cannot be used when running MultiSim.
- The CPR graph will not appear on the facilitator Run screen while using MultiSim. The CPR graph will appear only in TouchPro.

Setting Up MultiSim

To use the MultiSim feature, the following software and hardware is required:

- CAE Maestro v1.8 software
  
  **Note:** If you have an earlier version of Maestro, you must update it to version 1.8. To update Maestro, go to https://caehealthcare.com/support/software-updates/ and follow the on-screen instructions. The *Installing Maestro Updates* guide is also available on the website.

- Samsung Galaxy S3 or Surface Go tablet
- Two to 10 Juno simulators
- Linksys WRT3200ACM central router (purchased from and preconfigured by CAE)

<table>
<thead>
<tr>
<th>Setup Steps</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
</tr>
<tr>
<td>2</td>
</tr>
<tr>
<td>3</td>
</tr>
</tbody>
</table>

Step 1: Configure Simulators

Each simulator and its associated tablet must be configured to communicate with the central router.

To configure each simulator:

a. Power on the router and ensure the antennae is attached.

b. On the tablet, tap the **Maestro** icon.

c. On the Application Home screen, tap **CAEMaestro**.

d. On the CAE Maestro Home screen, tap the **Gear** icon in the upper-right corner, then select **System**.
The Simulator screen appears.

![Simulator Screen](image)

**Simulator Screen**

e. Tap the **Maintenance** tab to display the Simulator Configuration screen and tap the **Configure** button.

![Simulator Configuration Screen](image)

**Simulator Configuration Screen**

The Internet Connection (WAN) screen appears.

f. Select or change the following settings in order. As you select settings, additional settings appear.
IMPORTANT: Select or type the following information exactly as it is shown.

- **Connection Type**: Select **Bridge**.
- **SSID**: **CAE_multisimXXXXX** (the specific SSID - e.g. CAE_multisim_04663, is located on the bottom of the router).
- **Encryption**: **WPA pre-shared key**.
- **Security**: **WPA2 (AES)**.
- **Pre-Shared Key**: **caeadmin**.

The following images shows completed information for a CAE router connection.

![Internet Connection Settings Completed](image)

**IMPORTANT**: In the left panel, ensure the WiFi Channel is set to Auto. Tap on the **Eye** icon to confirm the password is entered correctly.

g. Tap **Save**.

**IMPORTANT**: If you inadvertently selected or entered incorrect settings, the simulator will not be able to connect to the router. This will disable your simulators. In that event, see “Re-establish a Network Connection” on page 144.

The Restart Required dialog box appears.

h. Tap **Restart** and continue the configuration process in **Step 2: Configure a Tablet**.
Step 2: Configure a Tablet

Follow the instructions to connect the tablet provided with your simulator to the MultiSim router and configure the application to the associated simulator.

**Samsung Tablet**

To configure a Samsung Tablet:

a. On the tablet, press the **Home** button.
   The Samsung Home screen appears.

b. On the screen, swipe the screen up to display the Search tablet screen.
c. Tap the **Settings** icon. 
The Settings screen appears.

![Connections tab](image)

**Connections** tab

d. Tap **Connections** tab to view connections settings.

![Settings Screen](image)

**Settings Screen**

e. Tap WiFi to view available networks.
The list of available networks appears.

f. Tap **CAE_multisim_XXXXX**.  
   **Note:** The XXXXX in the CAE MultiSim network name is a placeholder for the digits found on the bottom of the router.

The password prompt window appears.
g. Tap **Show Password** the radio button and enter the password `caeadmin`.

h. Tap **Connect**.
   i. Press the **Home** button on the tablet.
      The Samsung Home screen appears.

j. From the Home screen, tap the **Maestro** icon.
   The CAE Maestro app launches.

k. While the connection is being made, tap the **manually** link at the bottom of the screen.
Note: If a message appears that the connection to Maestro failed, tap **Modify address**.

The Simulator Manual Connection prompt opens.

![Simulation Manual Connection Prompt]

1. In the Address field, replace “simulator.local” with the simulator serial number associated with the tablet. Tap **Connect**.

   **Note**: The CAE serial number is located on the back of the tablet. (Example: JNE000527)

   The Maestro Home page appears.

   m. Continue the connection for the Maestro software in *Step 3: Connect Simulators to MultiSim*.

### Surface Go Tablet

To configure a Surface Go tablet:
a. From the Surface Go Home screen, tap the **CAEMaestro** icon to launch the app.

![Surface Go Tablet Home Screen](image)

The CAE Maestro Connecting screen appears.

![CAE Maestro Connection Screen](image)
The Connection Failed prompt will appear after 30 seconds of attempting to connect.

b. Tap the **Network** icon in the Windows taskbar to expand the available networks list.
Appendix D - CAE Maestro MultiSim

c. Tap CAE_multisim_XXXXX.

d. In the CAE_multisim_XXXXX network option, tap the Connect Automatically checkbox and then tap the Connect button. The network security key prompt appears.
e. Enter `caeadmin` into the security network key field using the on-screen keyboard.

![WiFi Connection - Network Security Key Prompt](image)

f. Tap **Next**.

g. When the discoverable PC prompt appears, tap **Yes**.

![WiFi Connection - Discoverable PC](image)

After WiFi connection is complete, the Connection Failed Prompt appears.
h. Tap the **Modify address** button.

![Modify address button]

The Simulator manual connection prompt appears.

i. Using the on-screen keyboard, delete `simulator.local` from the text field and enter the serial number found on the back of the tablet (ex. JNE000842).

![Delete and enter sim unit number]

j. Tap the X in the upper-right corner of the keyboard to exit the keyboard.
Appendix D - CAE Maestro MultiSim

k. Tap Connect.

The Maestro Home screen appears.

Step 3: Connect Simulators in MultiSim

Once simulators are configured, connect them in the Sim Lab. This lets you select simulators to run simultaneously.

To add simulators in the Sim Lab:

a. From the Maestro Home screen, tap the Gear icon and from the drop-down menu, tap System.

b. Tap Sim Lab tab.
c. On the Sim Lab screen, tap **Add simulators**.

![Sim Lab Screen](Image)

*Sim Lab Screen*

A list of configured simulators appears.

d. Tap the plus sign (++) next to each simulator you want to add.

Once added, the plus sign becomes a minus sign (-). Tap the minus sign to remove the simulator from the lab.

![Add Simulators Screen](Image)

*Add Simulators Screen*
e. (Optional) You can add a simulator not included in the list if you know the
IP address of the simulator. In the Manually add simulator field at the
bottom of the screen, type the IP address, and then tap the plus sign.

Manually Add Simulator

Using MultiSim

The MultiSim feature provides views and options that differ from running simulations without
MultiSim. This section describes only those views and options using MultiSim.

Run a Simulation

The tablet and simulator from which you run all simulations is designated as the “master” simulator.
The screen displays a list of simulators included in the simulation, but vitals and patient information
will appear only for the master simulator. Any changes made to the master simulator (such as
parameters, conditions, sounds, pulse, etc.) will apply to all simulators.

Example: Two simulators are configured to run a simulation (JNE000001 and JNE000002). You run
the simulations from JNE000001’s tablet, which becomes master. You will see two simulators running,
and data displaying for only the JNE000001 simulator. Any changes made to the master will apply to
JNE000002.

Master Simulator View
To run multiple simulators for a session:

1. From the Maestro Home screen, select **Simultaneous Control**.

2. Tap an option to run simulations: **Run on the Fly (Modeled)**, **Run on the Fly (Manual)** or **Run an SCE**.
   
   ° If you selected Run on the Fly (either mode), you are prompted to select a **Gender**, and then tap **Start**.

   OR

   ° If you selected Run an SCE, tap **Play** for a selected session.

   **CAUTION:** When running an SCE, if a simulator has another version of the selected SCE, a message appears indicating that the other version will be overwritten. To continue, tap **Overwrite other SCE versions**.

3. From the list of connected simulators (which appear as Online), select two or more to simulators to control, or tap **Select All**.

4. Tap **Continue**.

   The Runtime screen appears.
If a simulator disconnects while running a simulation, the simulator icon changes color. This may happen, for example, if the WiFi connection is lost.

To display a list of disconnected simulators, tap the Simulator icon.

The system will automatically reconnect when it becomes available again.
Setting Up TouchPro for MultiSim

To use TouchPro monitors in a MultiSim environment, the following software and hardware is required:

- One Juno simulator updated with CAE Maestro v1.8 software and already connected to MultiSim network
  
  **Note:** If you have not connected your simulator to the MultiSim network, refer to the *Setting Up MultiSim* section for further instructions.

- Ethernet cable
- MSI TouchPro monitor
- Linksys WRT3200ACM central router (purchased from and preconfigured by CAE)

Prior to beginning the TouchPro MultiSim setup, complete the steps outlined in the *TouchPro Getting Started Guide* provided with the MSI Monitor shipment.

### TouchPro MultiSim Setup Steps

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Connect Simulator to TouchPro Monitor</td>
</tr>
<tr>
<td>2</td>
<td>Download Maestro App</td>
</tr>
<tr>
<td>3</td>
<td>Connect TouchPro to MultiSim Network</td>
</tr>
<tr>
<td>4</td>
<td>Launch TouchPro</td>
</tr>
</tbody>
</table>

**Step 1: Connect Simulator to TouchPro Monitor**

To connect the simulator to the TouchPro monitor:

a. Connect one end of Ethernet cable to back of MSI (TouchPro) monitor.
b. Connect other end of Ethernet cable to LAN port on CAE Juno manikin.

![Back of MSI Monitor](image)

EMI cable in LAN port

Step 2: Download Maestro App

To download the Maestro app:

a. From the MSI monitor (TouchPro) desktop screen, tap **Google Chrome** icon to launch Google Chrome browser.

![Google Chrome icon](image)

MSI (TouchPro) Monitor Desktop

The Google Chrome browser window appears.
b. Tap in the address bar and using the keyboard, enter “simulator.local” and press Enter.

Google Chrome Browser Window

The CAE Maestro Download App page appears.
Appendix D - CAE Maestro MultiSim

c. Tap **Download**.

![CAE Maestro Download Page](image_url)
After the download is complete, a banner appears at the bottom of the Chrome window, asking whether to keep or discard the file.

**CAE Maestro Download Page**

d. Tap **Keep**.
The CAE-Maestro-Setup.exe appears in the Downloads bar at the bottom of the Google Chrome browser window.

![CAE Maestro Download Page](image)

e. Tap the CAE-Maestro-Setup.exe file.

The CAE Maestro Setup application launches and begins installing.

**Note:** During the CAE Maestro Setup application installation, a window may appear explaining that Windows Defender Firewall has blocked some features of this app. If it appears, tap *Allow* access.

The CAE Maestro screen appears.

### Step 3: Connect TouchPro to MultiSim Network

To connect the TouchPro to the MultiSim network:
a. Tap the **Network** icon in the Windows taskbar to expand the available networks list.

![Network icon](image)

*b. Tap CAE_multisim_XXXX.*

![WiFi Connection - MultiSim Network](image)

c. In the CAE_multisim_XXXX network option, tap the **Connect Automatically** checkbox and then tap **Connect**.
The network security key prompt appears.

**WiFi Connection - Network Security Key Prompt**

d. Tap in the Enter the security network key field and type `caeadmin`.

e. Tap the **Show password** (eyeball) icon to the right of the field and confirm the password has been entered correctly.

f. Tap **Next**.

g. If the discoverable PC prompt appears, tap **Yes**.

h. Wait a few moments while the MSI TouchPro connects to the Multisim network.

i. Close the Google Chrome browser window. The desktop is revealed, showing two new icons (CAE Maestro and CAE TouchPro). Tap on the **CAE TouchPro** icon.
Appendix D - CAE Maestro MultiSim

The CAE Maestro Connecting screen appears.

**CAE Maestro Connection Screen**

j. Tap on the **manually** link within the first 30 seconds of the application launching.
   The Connection failed message appears.

k. Tap the **Modify address** button.

**CAE Maestro Connection Failed Screen**

The Simulator manual connection prompt appears.
I. Using the keyboard, delete `simulator.local` from the text field and enter the serial number found on the back of the designated simulator's tablet (ex. `JNE000826`) or on the removable pad located on the manikin's hip.

m. Tap Connect.
   The Maestro Home screen appears.

**Step 4: Launch TouchPro**

To launch CAE Touch from the Maestro Home screen, tap **CAE TouchPro** icon.

**Note:** The CAE TouchPro app can also be launched from by tapping the CAE TouchPro icon located on the MSI TouchPro's desktop.

**Troubleshooting**

This section describes basic troubleshooting procedures.

**Re-establish a Network Connection**

When configuring the simulator, if you inadvertently selected or entered the wrong settings, the tablet will not connect to the central router. The following instructions will re-establish the network connection.
Appendix D - CAE Maestro MultiSim

You will need:

- A Windows-based laptop where you have Administrator rights
- An Ethernet cable
- Access to a web browser

To re-establish a network connection:

1. Plug the Ethernet cable in the manikin’s LAN port, and connect it to the laptop.

2. On the laptop, click the **Network** (Internet Access) icon (located in the lower-right corner of the Windows Taskbar). Then, click the **Network & Internet settings** link.

![Network Access Icon](Image)
3. In the Status window, scroll down and then select **View your network properties**.

**Status**

Send available networks

Change your network settings

- **Change adapter options**
  View network adapters and change connection settings.

- **Sharing options**
  For the networks you connect to, decide what you want to share.

- **HomeGroup**
  Set up a homegroup to share pictures, music, files, and printers with other PCs on your network.

- **Network troubleshooter**
  Diagnose and fix network problems.

**Windows Firewall**

**Status Window**

4. Scroll to locate the **Default gateway** IP address. (Example: 192.168.x.1, where “x” will vary based on your manikin.) Note this address.

**View your network properties**

5. Launch a web browser and enter the web address from Step 4, however, change the number “1” to “5”. (Example: 192.168.x.5).
6. On the CAEMaestro download page, click **Download**.

   ![Download Page](image)

   **Download Page**

7. When a message appears in the lower-left of the screen, click **Keep**.

8. From the Download folder, double-click the **CAE-Maestro-Setup.exe** file.

9. If a SmartScreen opens, click **Run**.

   **Note:** If the Run button does not appear, click **More Info**.

10. Complete the configuration process:

    a. **On your laptop:** Click the **Maestro** icon on your desktop. Follow the instructions in “Step 1: Configure Simulators”.
    
    b. **On your tablet:** Refer to “Step 2: Configure a Tablet”.

APPENDIX E - IMPORTING LEARNING MODULES

Users can import Learning Modules into the CAE Maestro software using a Windows computer and the instructor tablet. Purchased Learning Modules are sent in a .zip file format.

Prior to importing learning modules, users must:

1. Download the Learning Module zip file.
2. Locate the Learning Module zip file on the Windows PC and right-click on the folder.
3. From the pop-up menu options, select Extract All to unzip the folder.

The CAE Maestro software is available on two types of instructor tablets: Samsung Galaxy Tab S3 or the Microsoft Surface Go tablet. For instructions on how to import learning modules on the Surface Go, see “Surface Go Tablet” on page 158.

Note: The following instructions for importing Learning Modules into CAE Maestro will vary depending on the type of tablet provided with the simulator.

Samsung Galaxy Tab S3

To transfer Learning Modules to the instructor tablet:

1. Connect the Samsung tablet to the Windows PC using the white USB-C interface cable.
2. When the pop-up message appears asking you to allow access to device data, tap Allow to access the Samsung tablet as if it were a USB drive.
3. Open File Explorer and locate the Galaxy Tab S3 folder.

4. Locate Download/Learning Modules folder on the tablet.

*Note:* If the Learning Modules folder does not yet exist in the Download folder, create the new folder now using the steps below:

a. While in the Downloads folder, right-click to open a context menu and select **New Folder**.

b. Name the new folder Learning Modules and press **Enter**.
5. Move the Learning Modules folder/s from the location on your PC to the Downloads > Learning Modules folder on the Samsung tablet.

6. Disconnect the tablet from the PC after the transfer/s are complete.
Import Learning Modules from the Samsung Tablet into CAE Maestro

To import Learning Modules into the Samsung instructor tablet:

1. Power on the simulator and wait for it to say, “Hello.”
2. Power on the tablet, tap CAEMaestro to start Maestro, and log in.
3. When the Home screen appears, tap the SCE Manager tab.
4. Tap the **More** tab and choose **Import Module** from the drop-down menu.

![SCE Manager Screen - Import Module]

5. In the Select an Action pop-up menu, tap **Files**.

![SCE Manager Screen - Select an Action]
6. In the upper-right corner of the screen, tap **More Options** (vertical ellipsis) to display a pop-up menu.

7. Tap **Show internal storage**.

   **Note:** If the dialog box opens with **Hide internal storage** displayed, close the menu by tapping anywhere outside of the box.

8. In the upper-left corner, tap **Expand** (three horizontal lines) to open the File Manager.
9. From the File Manager menu, tap Galaxy Tab S3 folder.

The Galaxy Tab S3 folder menu appears.

10. Tap the Download folder.

11. Tap the Learning Modules folder.
12. In the upper-right corner, tap View to toggle to List View.

**Learning Module Folder - Grid View**

The items in the Learning Modules folder appear in List View.

**Learning Module Folder - List View**
13. Tap the desired Learning Modules folder to view folder contents and tap the Learning Module file (with .mlm extension) to select and import the file.

![Learning Modules Folder - Select the .mlm File](image)

The Importing window appears in the CAE Maestro software. When the import is completed, a Success message appears.

14. Tap **Close** and the contents of the Learning Module appear in the SCE Manager.
Surface Go Tablet

To transfer Learning Modules from the Windows PC to the Surface Go Tablet:

1. Insert a USB Key into the PC. On the PC, navigate to Downloads then right-click on the Learning Modules folder and choose **Copy**.

   ![Learning Modules Folder on PC - Copy Command](image1.png)

2. Select the USB Key in File Explorer. Right-click in the USB Key folder, then choose **Paste**.

   ![Learning Modules Folder on PC - Paste Command](image2.png)
3. Right-click on the USB Key device folder and choose Eject Device.

Connect the USB Key to the USB-C dongle, then connect the USB-C dongle to the Surface Go Tablet.

4. Power on the Surface Go Tablet. In File Explorer, the USB Key drive appears. Tap on the USB Key drive to open the USB Key file directory.
5. Tap on the folder named XYZ Learning Module. In the menu bar, tap **Copy**.
