

## CAEVimedix 3.2

High-fidelity  
ultrasound simulator  
with new features  
and software update

Get the new software update today!

### Bring ultrasonography training to life with CAE's new Vimedix 3.2 software update

While CAE's Vimedix 3.1 paved the way for remote ultrasound learning, **CAE Vimedix 3.2** offers improved fidelity, ultrasonography realism, 3D/4D ultrasound and multiplanar reconstruction (MPR) across the entire Vimedix 3.0 platform. This groundbreaking imaging technology provides 4D views of anatomical planes, giving a much deeper diagnostic insight for sonography.

With a library of more than 200 pathologies, Vimedix 3.2 delivers new capabilities for virtual lectures, with quick lesson-building, complementary ICCU e-Learning and interactive, hands-on practice using a manikin and ultrasound probes. Also, now includes new Transgastric Abdominal Ultrasonography guidelines and training exercises.

Heighten your abilities in ultrasound with the CAE Vimedix 3.2 software update! Train across multiple disciplines (cardiology, emergency medicine, ICU, OB-GYN) all on one common platform.

Improved fidelity

Equip instructors to create  
and embed exercises

Remote presentation tools

3D/4D ultrasound and MPR across  
entire Vimedix 3.0 platform

Available at no additional cost for all CAE Vimedix 3.0 customers with an active support and maintenance contract. Learn more at [caehealthcare.com/vimedix](https://caehealthcare.com/vimedix), or request the software update by contacting us at:
